

ROSHAN KAKARLA

DevSecOps & Cloud Infrastructure Engineer | Phone: (224) 255-3103 | Email : roshank041089@gmail.com | LinkedIn

7+ Years · AWS · Azure · Kubernetes · Terraform · DevSecOps · SRE · CI/CD

PROFESSIONAL SUMMARY

Results-driven DevSecOps and Cloud Infrastructure Engineer with 7+ years of progressive experience architecting, securing, and operating enterprise-grade platforms at scale. Proven track record across Fortune 500 environments (TransUnion, Dollar General, P&G) delivering measurable improvements in deployment reliability, security posture, and operational efficiency. Deep expertise spanning AWS and Azure cloud platforms, Kubernetes orchestration, Infrastructure as Code, and embedding security controls natively into CI/CD pipelines. Recognized for building resilient, audit-ready systems that accelerate delivery velocity without compromising compliance or stability.

CORE COMPETENCIES

- Cloud Architecture (AWS / Azure)
- DevSecOps & Shift-Left Security
- Site Reliability Engineering (SRE)
- Kubernetes & Container Orchestration
- Infrastructure as Code (Terraform)
- CI/CD Pipeline Engineering
- Incident Management & Root Cause
- Observability & Monitoring
- Compliance, Audit & RBAC Governance

PROFESSIONAL EXPERIENCE

DevSecOps Engineer | **TransUnion** Chicago, IL

January 2025 – Present

Embedded security controls across AWS cloud infrastructure, EKS-based container platforms, and enterprise CI/CD pipelines supporting highly regulated, security-sensitive financial data workloads.

- Cloud Security:** Engineered secure AWS infrastructure (EC2, EKS, IAM, VPC, ALB, CloudWatch) with multi-layer network segmentation and encryption, reducing attack surface across 5+ regulated production environments.
- IaC Governance:** Authored 30+ reusable Terraform modules with embedded security guardrails and policy-aligned configurations, eliminating infrastructure misconfiguration errors and reducing provisioning time by ~60%.
- CI/CD Security:** Integrated DevSecOps controls into Jenkins and GitHub Actions pipelines including secrets management, IAM-based authentication, and automated SAST/DAST scanning enforcing shift-left security at every commit.
- Kubernetes:** Hardened AWS EKS security posture through controlled deployment strategies, workload isolation, and network policies, minimizing blast radius and reducing critical vulnerability exposure across container workloads.
- Observability:** Built centralized observability platform using CloudWatch, Prometheus, and Grafana to detect anomalous behavior and availability risks; reduced mean time to detect (MTTD) security incidents by ~45%.
- Compliance:** Enforced least-privilege access, RBAC, and environment isolation across AWS, Kubernetes, and CI/CD tooling; supported 3 compliance audits with zero major findings.
- Documentation:** Authored comprehensive DevSecOps runbooks, cloud security standards, and audit documentation consumed by 15+ engineers across platform and security teams.

DevOps Cloud Engineer | **Dollar General** Goodlettsville, TN

June 2023 – December 2024

Delivered Azure cloud infrastructure and CI/CD automation supporting large-scale retail and supply-chain systems, improving deployment reliability and cloud cost efficiency across enterprise environments.

- Azure Platform:** Built and managed Azure infrastructure (AKS, VNets, Load Balancers, Storage Accounts, Azure Monitor) supporting 99.9% availability SLAs across critical retail applications.
- IaC Automation:** Developed 20+ reusable Terraform modules for Azure, reducing environment setup time from days to under 2 hours and ensuring configuration consistency across dev, staging, and production.
- CI/CD Engineering:** Designed and maintained CI/CD pipelines with Azure DevOps and GitHub Actions, automating end-to-end build, test, and deploy workflows and reducing deployment-related failures by ~35%.
- Kubernetes:** Managed AKS-based container platforms with proactive capacity planning and deployment governance, supporting 50+ microservices in production with zero cluster-level outages.
- Observability:** Implemented Azure Monitor, Log Analytics, and Grafana dashboards providing real-time visibility into system health for on-call teams; reduced average MTTR from 90 to under 40 minutes.
- FinOps:** Executed cloud cost optimization initiative identifying \$200K+ in annual savings through right-sizing, reserved instance adoption, and cleanup of orphaned resources.

Site Reliability Engineer (SRE) | Procter & Gamble Cincinnati, OHJanuary 2022 – May 2023

Ensured reliability and operational stability of mission-critical on-prem and hybrid enterprise systems supporting core P&G business operations, with a focus on automation, incident management, and SRE best practices.

- **Reliability:** Maintained 99.95% availability on large-scale Linux/Windows Server production systems supporting core manufacturing and supply-chain operations through proactive reliability engineering.
- **Automation:** Automated 40+ recurring operational workflows using Ansible, Bash, and Python, eliminating ~15 hours of manual toil per week and reducing human-error-related incidents by 30%.
- **Observability:** Built Prometheus and Grafana monitoring stack with 100+ custom dashboards and alerting rules, enabling proactive detection of performance degradation before customer impact.
- **Incident Management:** Led root cause analysis for 20+ high-severity incidents; authored post-mortems driving corrective actions that reduced recurrence of top-5 incident categories by 50%.
- **Runbooks:** Developed standardized runbooks and incident response playbooks adopted organization-wide, reducing P1 MTTR by 35% and accelerating on-call team onboarding.
- **Modernization:** Introduced DevOps automation practices into legacy on-prem operations, modernizing deployment workflows and improving release frequency for 10+ application teams.

DevOps Engineer | Cosmicvent Software Pvt. Ltd. Hyderabad, IndiaJanuary 2019 – June 2021

Built foundational DevOps capabilities for AWS-hosted SaaS applications, establishing reliable CI/CD pipelines, containerization standards, and cloud operational practices from the ground up.

- **AWS Infrastructure:** Designed and managed AWS infrastructure (EC2, S3, RDS, IAM, VPC) for SaaS web applications, achieving consistent 99.9% uptime across development and production environments.
- **CI/CD:** Built Jenkins/Git CI/CD pipelines automating application builds, testing, and deployments across 3 environments, reducing release cycle from 2 weeks to 3 days.
- **Containerization:** Led containerization of 8 core applications using Docker and introduced Kubernetes for orchestration, standardizing runtime environments and eliminating 90% of environment-related deployment failures.
- **Monitoring:** Implemented CloudWatch monitoring and alerting, improving mean time to detect production issues from hours to under 15 minutes.

TECHNICAL SKILLS

Cloud Platforms	Amazon Web Services (AWS), Microsoft Azure
Containers &Orchestration	Docker, Kubernetes (EKS, AKS), Helm
Infrastructure as Code	Terraform, Ansible, Packer
CI/CD & Release Eng.	Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps Pipelines
Security & DevSecOps	IAM, RBAC, Secrets Management, Vulnerability Scanning, SAST/DAST, Policy Enforcement
Observability	Prometheus, Grafana, ELK Stack, Splunk, CloudWatch, Azure Monitor
Scripting & Config	Python, Bash, YAML
Operating Systems	Linux (RHEL, Ubuntu), Windows Server On-Prem, Cloud & Hybrid
Networking	Load Balancing, DNS, Firewalls, TLS/SSL, High Availability, Fault Tolerance
Version Control	Git, GitHub, GitLab

EDUCATION

Master of Science Information Technology ManagementIndiana Wesleyan University, Marion, IN
