ROSHAN KAKARLA

DevSecOps & Cloud Infrastructure Engineer

(224) 255-3103 | roshank041089@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Results-driven DevSecOps and Cloud Infrastructure Engineer with 7+ years of progressive experience architecting, securing, and operating enterprise-grade platforms at scale across AWS, Azure, and GCP. Proven track record in Fortune 500 environments (TransUnion, Dollar General, P&G) delivering measurable improvements in deployment reliability, security posture, and operational efficiency. Deep expertise in Kubernetes orchestration, Infrastructure as Code (Terraform), CI/CD pipeline engineering, and embedding shift-left security controls natively into the software delivery lifecycle. Skilled in observability, incident management, root cause analysis, and compliance/audit governance, with a strong record of building resilient, audit-ready systems that accelerate delivery velocity without compromising stability.

KEY SKILLS & COMPETENCIES

- Cloud Architecture & Security – AWS (EC2, EKS, IAM, VPC, ALB, CloudWatch), Microsoft Azure (AKS, Azure Monitor, Log Analytics), Google Cloud Platform (GCP), Network Segmentation
- DevSecOps & Shift-Left Security – SAST/DAST scanning, Secrets Management, IAM Access Reviews, Vulnerability Management
- Site Reliability Engineering (SRE) – Incident Response, Root Cause Analysis, Capacity Planning, Performance Tuning
- Kubernetes & Container Orchestration – EKS, AKS, Helm, Docker
- Infrastructure as Code – Terraform, Ansible, Packer
- CI/CD Pipeline Engineering – Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps Pipelines
- Observability & Monitoring – Prometheus, Grafana, ELK Stack, Splunk, CloudWatch, Azure Monitor
- Compliance, Audit & Governance – RBAC, Least-Privilege Access, Audit Documentation, Regulated/Financial Data Environments
- Automation & Scripting – Python, Bash, YAML

EDUCATION

Master of Science in Information Technology Management
Indiana Wesleyan University — Marion, Indiana

PROFESSIONAL EXPERIENCE

DEVSECOPS ENGINEER | TRANSUNION | CHICAGO, IL | JAN 2025 – PRESENT

- Engineered secure AWS infrastructure (EC2, EKS, IAM, VPC, ALB, CloudWatch) with multi-layer network segmentation and encryption, reducing attack surface across 5+ regulated production environments within the first 6 months on the team.
- Authored 30+ reusable Terraform modules with embedded security guardrails and policy-aligned configurations over Q1–Q2 2025, eliminating infrastructure misconfiguration errors and reducing AWS provisioning time by ~60%.
- Integrated DevSecOps controls into Jenkins and GitHub Actions pipelines, including secrets management, IAM-based authentication, and automated SAST/DAST scanning, enforcing shift-left security at every commit across all active AWS pipelines.
- Hardened AWS EKS security posture through controlled deployment strategies, workload isolation, and network policies, minimizing blast radius and reducing critical vulnerability across container workloads supporting regulated financial data.
- Built a centralized observability platform using CloudWatch, Prometheus, and Grafana to detect anomalous behavior and availability risks, cutting mean time to detect (MTTD) security incidents by ~45% within the first two quarters.
- Enforced least-privilege access, RBAC, and environment isolation across AWS, Kubernetes, and CI/CD tooling, supporting 3 compliance audits with zero major findings since January 2025.
- Authored comprehensive DevSecOps runbooks, AWS cloud security standards, and audit documentation consumed by 15+ engineers across platform and security teams.
- Conducted recurring IAM access reviews and permission audits across AWS accounts, tightening least-privilege boundaries and reducing over-permissioned roles quarter over quarter.
- Participated in on-call rotations supporting AWS production workloads, driving rapid triage and resolution of availability and security events for regulated enterprise systems.

- Partnered with security, platform, and application teams to standardize AWS configurations and resolve cross-system conflicts without disrupting delivery timelines.

DEVOPS CLOUD ENGINEER | DOLLAR GENERAL | GOODLETTSVILLE, TN | JUN 2023 – DEC 2024

- Built and managed Azure infrastructure (AKS, VNets, Load Balancers, Storage Accounts, Azure Monitor) supporting 99.9% availability SLAs across critical retail applications throughout an 18-month tenure.
- Developed 20+ reusable Terraform modules for Azure, reducing environment setup time from days to under 2 hours and ensuring configuration consistency across dev, staging, and production within the first quarter.
- Designed and maintained CI/CD pipelines with Azure DevOps and GitHub Actions, automating end-to-end build, test, and deploy workflows and reducing deployment-related failures by ~35% over the engagement.
- Managed AKS-based container platforms with proactive capacity planning and deployment governance, supporting 50+ microservices in production with zero cluster-level outages across 18 months.
- Implemented Azure Monitor, Log Analytics, and Grafana dashboards providing real-time visibility into system health for on-call teams, reducing average MTTR from 90 to under 40 minutes.
- Executed a cloud cost optimization initiative identifying $200K+ in annual savings through right-sizing, reserved instance adoption, and cleanup of orphaned resources over a 6-month optimization cycle.
- Supported evaluation of Google Cloud Platform (GCP) services as part of a multi-cloud resilience assessment, documenting compatibility considerations alongside the existing Azure footprint.
- Contributed to backup and disaster recovery planning for Azure-hosted retail systems, improving recovery readiness for supply-chain-critical applications.
- Coordinated with application teams to align Azure resource capacity with workload requirements, supporting production stability for retail and supply-chain systems.
- Created detailed runbooks and operational documentation to support on-call teams, incident response, and consistent production support across the 18-month engagement.

SITE RELIABILITY ENGINEER (SRE) | PROCTER & GAMBLE (P&G) | CINCINNATI, OH | JAN 2022 – MAY 2023

- Maintained 99.95% availability on large-scale Linux/Windows Server production systems supporting core manufacturing and supply-chain operations through proactive reliability engineering across a 16-month tenure.
- Automated 40+ recurring operational workflows using Ansible, Bash, and Python, eliminating ~15 hours of manual toil per week and reducing human-error-related incidents by 30% within the first year.
- Built a Prometheus and Grafana monitoring stack with 100+ custom dashboards and alerting rules, enabling proactive detection of performance degradation before customer impact.
- Led root cause analysis for 20+ high-severity incidents over the engagement, authoring post-mortems that drove corrective actions reducing recurrence of top-5 incident categories by 50%.
- Developed standardized runbooks and incident response playbooks adopted organization-wide, reducing P1 MTTR by 35% and accelerating on-call team onboarding.
- Introduced DevOps automation practices into legacy on-prem operations, modernizing deployment workflows and improving release frequency for 10+ application teams.
- Participated in early-stage evaluation of Google Cloud Platform (GCP) as part of a hybrid-cloud modernization initiative, assessing migration paths for select on-prem workloads.
- Performed capacity planning and performance tuning across on-prem and hybrid environments, supporting business-critical application scaling during peak demand periods.
- Collaborated with application and infrastructure teams to improve system resilience and reduce mean time to recovery across shared production environments.
- Conducted performance tuning of Linux and Windows Server workloads, improving throughput and stability for business-critical manufacturing systems.

DEVOPS ENGINEER | COSMICVENT SOFTWARE PVT. LTD. | HYDERABAD, INDIA | JAN 2019 – JUN 2021

- Designed and managed AWS infrastructure (EC2, S3, RDS, IAM, VPC) for SaaS web applications, achieving consistent 99.9% uptime across development and production environments over a 2.5-year tenure.

- Built Jenkins/Git CI/CD pipelines automating application builds, testing, and deployments across 3 environments, reducing release cycle from 2 weeks to 3 days within the first 6 months.
- Led containerization of 8 core applications using Docker and introduced Kubernetes for orchestration, standardizing runtime environments and eliminating 90% of environment-related deployment failures. ‘
- Implemented CloudWatch monitoring and alerts, cutting issue detection time to under 15 minutes.
- Configured IAM roles, security groups, and VPC controls to enforce least-privilege access on AWS.
- Identified AWS right-sizing opportunities, reducing unnecessary compute and storage spend.
- Maintained infrastructure diagrams and documentation to support onboarding and troubleshooting.
- Partnered with development teams to streamline releases and reduce deployment friction.
- Scaled AWS infrastructure to support a growing SaaS user base while maintaining performance.
- Onboarded new engineers on AWS and CI/CD tooling, accelerating ramp-up through hands-on training.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS: EC2, S3, RDS, EKS, IAM, VPC, CloudWatch, ALB), Microsoft Azure (AKS, Azure Monitor, Log Analytics), Google Cloud Platform (GCP)
Containers & Orchestration: Docker, Kubernetes (EKS, AKS), Helm
Infrastructure as Code: Terraform, Ansible, Packer
CI/CD & Release Engineering: Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps Pipelines
Security & DevSecOps: IAM, RBAC, Secrets Management, Vulnerability Scanning, SAST/DAST, Least-Privilege Access, Network Segmentation
Observability & Monitoring: Prometheus, Grafana, ELK Stack, Splunk, CloudWatch, Azure Monitor
Site Reliability Engineering: Incident Response, Root Cause Analysis, Capacity Planning, Performance Tuning, Disaster Recovery
Scripting & Automation: Python, Bash, YAML
Operating Systems: Linux (RHEL, Ubuntu), Windows Server; On-Prem, Cloud & Hybrid
Networking: Load Balancing, DNS, Firewalls, TLS/SSL, High Availability, Fault Tolerance
Version Control: Git, GitHub, GitLab
